

31 March 2019

The fund is invested in the Standard Life Investments Global Absolute Return Strategies Fund which aims to provide positive investment returns in all market conditions over the medium to long term. The fund is actively managed, with a wide investment remit to target a level of return over rolling three-year periods equivalent to cash plus five per cent per year, gross of fees. It exploits market inefficiencies through active allocation to a diverse range of market positions. The fund uses a combination of traditional assets (such as equities and bonds) and investment strategies based on advanced derivative techniques, resulting in a highly diversified portfolio. The fund can take long and short positions in markets, securities and groups of securities through derivative contracts.

The value of investments within the fund can fall as well as rise and is not guaranteed - you may get back less than you pay in. The fund may use derivatives for the purpose of efficient portfolio management and to meet its investment objective. The sterling value of overseas assets held in the fund may rise and fall as a result of exchange rate fluctuations.

Pooled Pension Investment Fund
