

31 December 2018

The primary aim of the fund is to maintain capital and provide returns in line with money market rates, before charges. To meet this aim, the fund invests in a portfolio of money market instruments and invests not only in bank and building society deposits but also in a variety of other money market instruments such as Certificates of Deposits (CDs), Floating Rate Notes (FRNs) including Asset Backed Securities (ABSs) where, when purchased, repayment is within 2 years.

The fund price is not guaranteed by Standard Life and there could be circumstances where the fund price may fall. A fall might happen if, for example, there is a default by one of the banks where some of the money is held or where there is an adverse market movement in the value of one or more of the securities held due to for instance a credit event. A fall may also happen if fund income falls so low as to be less than the charges applied to the fund.

The value of any investment can fall as well as rise and is not guaranteed – you may get back less than you pay in.

Definitions

Volatility Rating - The volatility rating of a fund indicates how much the fund price might move compared to other funds. The higher the volatility rating, the less stable the fund price is likely to be. You can use this to help you decide how much risk you're comfortable taking with your investments.

Running Yield - indicates the anticipated income from the assets in which the fund invests, expressed as a percentage of the current market value of those assets. Please note that this is not the same as the income that is distributed to investors because, for example, charges for running the fund will be deducted from this.
