

31 December 2018

The fund is invested in the Standard Life Investments MyFolio Managed III Fund which aims to provide a total return from a combination of income and capital appreciation over the longer term. Investing mainly in a range of collective investment schemes managed or operated within the Standard Life group of companies, the fund achieves a broad exposure to diversified investments, including equities, absolute returns, fixed and variable rate interest bearing securities and immoveable property. The fund may also invest in transferable securities, money-market instruments, deposits and cash. Typically the fund will take a balanced view on lower and higher risk assets.

The value of investments within the fund can fall as well as rise and is not guaranteed - you may get back less than you pay in. The fund may use derivatives for the purposes of efficient portfolio management, reduction of risk or to meet its investment objective if this is permitted and appropriate. The sterling value of overseas assets held in the fund may rise and fall as a result of exchange rate fluctuations.

Definitions

Volatility Rating - The volatility rating of a fund indicates how much the fund price might move compared to other funds. The higher the volatility rating, the less stable the fund price is likely to be. You can use this to help you decide how much risk you're comfortable taking with your investments.

Cash and Other - may include bank and building society deposits, other money market instruments such as Certificates of Deposits (CDs), Floating Rate Notes (FRNs) including Asset Backed Securities (ABSs), Money Market Funds and allowances for tax, dividends and interest due if appropriate.

Key Risks

The fund can invest in a wide variety of investment strategies and assets. Below we document the specific or heightened risks applicable to this fund rather than an exhaustive list.

Collective Investment Schemes - The fund can invest in collective investment schemes which can themselves invest in a diverse range of other assets. These underlying assets may vary from time to time but each category of asset (which may include equities, bonds or immoveable property) has individual risks associated with them. The fund may not have any control over the activities of any collective investment scheme invested in by the fund.

Equities Risk - This fund can invest in equities which are one of the more volatile asset classes and can therefore suffer sudden sharp falls or rises. Equities can offer good growth potential over the longer term but may have a higher volatility than other asset classes.

Bond Risk - This fund can invest in bonds, the value of a bond may fall if, for example, the company or government issuing the bond is unable to pay the loan amount or interest when they are supposed to. The value may also be affected by movements in interest rates which may result in the value of the bond rising or falling. This may (or will) result in the value of the fund falling.

Property Risk - This fund can invest in direct property. The value of properties held in any property fund is generally a matter of the valuer's opinion and not fact. Property can also be difficult to sell, so you might not be able to sell your investment when you want to.

Key Risks (continued)

Absolute Return - This fund invests in one or more absolute return funds. It is important not to confuse absolute return funds with guaranteed funds or products which guarantee a positive return over any period. Absolute return funds can lose money when markets rise and vice-versa. They aim to reduce overall volatility by using more sophisticated investment techniques and instruments such as derivatives. Derivatives are financial instruments which derive their value from an underlying asset, such as a share or bond, and are used routinely in global financial markets. Used carefully, derivatives offer an effective and cost-efficient way of investing in markets. However, derivatives can lead to increased volatility of returns in a fund, thus requiring a robust and extensive risk management process. While the fund will not borrow cash for investment purposes, the total value of exposures to markets will routinely exceed the fund's net asset value. Derivatives may be Exchange Traded or Over the Counter (OTC).

However, the success of the fund is heavily dependent on the skill of the fund managers and the investment strategies they employ. As such, the performance of an absolute return fund is heavily dependent on the skill of the fund managers and the investment strategies they decide to employ, rather than the direction of the market.
