

31 December 2019

The SL ASI MyFolio Market III Pension Fund invests primarily in the ASI MyFolio Market III Fund. The aim of the ASI MyFolio Market III Fund is summarised below.

The fund aims to provide growth over the long term while being managed to a defined level of risk. It is one of the five funds in part of the MyFolio Market range each of which offers a different level of expected investment risk and return. The fund is risk level III, which aims to be the middle risk fund in this range. This level invests in both traditionally lower risk assets such as money market instruments including cash and certain types of bonds, and traditionally higher risk assets such as company shares, certain types of bonds and commercial property. This may suit you if you have a balanced attitude to risk. The fund invests at least 60% in passively managed funds, including those managed by Aberdeen Standard Investments, to obtain broad exposure to a range of diversified investments. Typically at least 25% is invested in assets traditionally viewed as being lower risk such as money market instruments including cash, government bonds (loans to a government) and investment grade corporate bonds (loans to a company).

The rest of the fund is invested in a selection of other assets such as company shares including property shares and commercial property. The fund is actively managed by the investment team. Their main focus is to select funds within each asset class and ensure that the strategic asset allocation (long-term proportions in each asset class) meets the fund's objectives. In addition, they will take tactical asset allocations (changing short term proportions in each asset class) to improve returns. It may consist of up to 40% actively managed funds (again including those managed by Aberdeen Standard Life Investments). Please note that the number contained in the fund name is not related to the synthetic risk and reward indicator contained in the Key Investor Information document (NURS-KII).

The value of any investment can fall as well as rise and is not guaranteed – you may get back less than you pay in.

Definitions

Volatility Rating (0-7) - The volatility rating of a fund indicates how much the fund price might move compared to other funds. The higher the volatility rating, the less stable the fund price is likely to be. You can use this to help you decide how much risk you're comfortable taking with your investments. Volatility ratings are calculated on a scale of 0-7.

Cash and Other - may include bank and building society deposits, other money market instruments such as Certificates of Deposits (CDs), Floating Rate Notes (FRNs) including Asset Backed Securities (ABSs), Money Market Funds and allowances for tax, dividends and interest due if appropriate.

Key Risks

The fund can invest in a wide variety of investment strategies and assets. Below we document the specific or heightened risks applicable to this fund rather than an exhaustive list.

Collective Investment Schemes - The fund can invest in collective investment schemes which can themselves invest in a diverse range of other assets. These underlying assets may vary from time to time but each category of asset (which may include equities, bonds or immoveable property) has individual risks associated with them. The fund may not have any control over the activities of any collective investment scheme invested in by the fund.

Equities Risk - This fund can invest in equities which are one of the more volatile asset classes and can therefore suffer sudden sharp falls or rises. Equities can offer good growth potential over the longer term but may have a higher volatility than other asset classes.

Bond Risk - This fund can invest in bonds, the value of a bond may fall if, for example, the company or government issuing the bond is unable to pay the loan amount or interest when they are supposed to. The value may also be affected by movements in interest rates which may result in the value of the bond rising or falling. This may (or will) result in the value of the fund falling.

Property Risk - This fund can invest in direct property. The value of properties held in any property fund is generally a matter of the valuer's opinion and not fact. Property can also be difficult to sell, so you might not be able to sell your investment when you want to.
