

31 December 2019

The goal of this fund is to make sure that at your retirement date your money is in investments which are considered appropriate if you have yet to decide how you're going to take your retirement income or if you want to take a flexible income (known as drawdown). It's used as part of a Universal strategic lifestyle profile (SLP), and may not be suitable as a standalone fund or if you're building your own portfolio from our full fund range.

The fund aims to meet its goal by holding different types of investment funds, such as those investing in equities (shares), bonds (loans to a government or company) and non-residential property (such as offices, shopping centres and shares in property development companies). The investments in the fund can be from around the world, including emerging markets, which means that some of the investments will be in a foreign currency. The fund can also invest in absolute return funds that aim to provide positive investment returns, regardless of whether markets are going up or down, over the medium to long term. They do this by using a wide range of investment strategies including those using derivatives. Derivatives are financial instruments whose value comes from movement in other investments, such as equities and currencies.

As you can normally take a tax free lump sum from your pension pot, some of the fund is invested in lower risk money market funds. There are circumstances where money market instruments can fall in value.

All investments are reviewed regularly to make sure they remain suitable for the fund's goal, and may change over time. The fund doesn't provide any guarantee about the level of retirement income you'll receive.

The value of investments within the fund can fall as well as rise and is not guaranteed - you may get back less than you pay in. The fund may use derivatives for the purposes of efficient portfolio management, reduction of risk or to meet its investment objective if this is permitted and appropriate. The sterling value of overseas assets held in the fund may rise and fall as a result of exchange rate fluctuations.

Note: The information shown relates to the past. Past performance is not a guide to the future. The value of your investment can go down as well as up. For the relevant charges on your policy please refer to your policy documentation.

#### Definitions

Volatility Rating (0-7) - The volatility rating of a fund indicates how much the fund price might move compared to other funds. The higher the volatility rating, the less stable the fund price is likely to be. You can use this to help you decide how much risk you're comfortable taking with your investments. Volatility ratings are calculated on a scale of 0-7.
